ACCUSPLIT, an American company,
invented the first hand-held digital stopwatch in 1972.

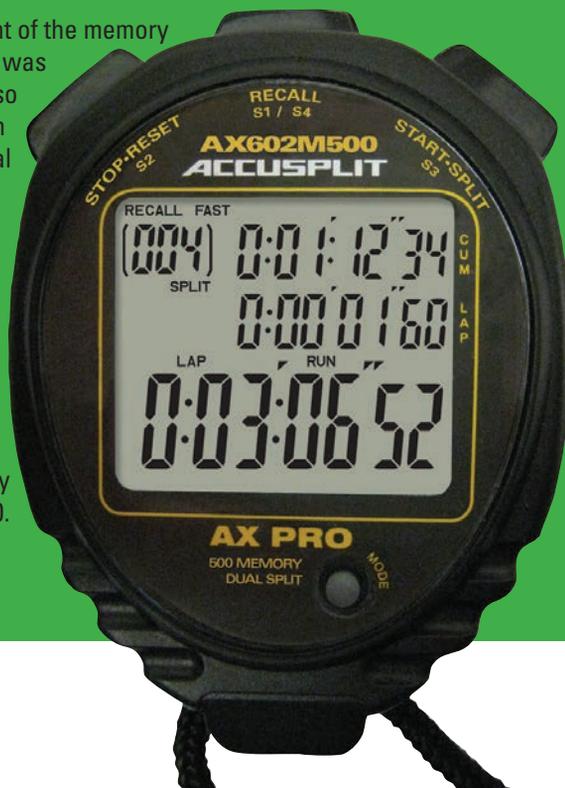

W. Ron Sutton, the ACCUSPLIT, CEO, saw the need to add Memory to the digital stopwatch because some events required accurate tracking of split times and finish times, too rapid or numerous to capture during the event, manually.

Witnessing a competition timing of a hurdle race with rapid "Touch Down Splits" would prove that ACCUSPLIT memory stopwatches would fill an important need and become #1 in the world.

MR. STOPWATCH

MEMORY STORY

In 1977, during development of the memory stopwatch, the technology was new, expensive, and rare, so the first memory stopwatch had only 12 splits and 6 dual splits, the ACCUSPLIT 760. As technology improved and costs came down, memory expanded, first to 100, then more. Now, memory is so economical that multiple uses for memory are common, dual splits are standard, and all ACCUSPLIT Memory models are well under \$100.

RUBY IS 40TH ANNIVERSARY STONE

2018 is the 40th Anniversary of the invention of the Memory Stopwatch by W Ron Sutton in 1978.

To memorialize the event, ACCUSPLIT is producing translucent Ruby case Signature Models, starting with the AX725RUBY and the AX740RUBY.

All of the ACCUSPLIT innovations are included in these models. Celebrate the inventing of the Memory Stopwatch with a Signature Ruby model of ACCUSPLIT Professional Stopwatches.

BUTTON STORY

The ACCUSPLIT “X” Case Button Assembly is unique. No one else has ever gone to the trouble and expense to duplicate this specially designed assembly.

The ACCUSPLIT Button “action” specification is the catalyst for the unique design. From the beginning, our specification required the electronic switching buttons to feel like the precise mechanical stopwatch buttons from Switzerland. To accomplish that requirement the electronic switch action became a tightly controlled carbon infused rubber membrane dome collapse under the pressure from the button atop the dome.

To achieve the proper feel the button was designed to “rock” not go straight down. If you look closely, from the side, when you push an “X” Case Button, you will see that it is “rocking” in the direction of a “trigger finger action”, the second fastest nerve-muscle action in the body (the eye lid blink is the fastest). You will also note, from the side view, that the “X” Case Button slopes to perfectly fit a cocked finger joint which is the proper way to push a button for accurate, controlled timing (not with a thumb). This combination of specifications produces the world’s best stopwatch switch assembly.

WATER RESISTANT X-CASE

From the 1st ACCUSPLIT Memory Stopwatch, Water Resistance (WR) has been a key design specification. ACCUSPLIT Stopwatches are used in environmentally hostile conditions, with dust, rain, water. Even “high humidity” conditions cause system component deterioration from rust and oxidation coatings on critical surfaces. Switch/button function can easily be compromised with simple oxidation of the switch surface.

Every ACCUSPLIT Stopwatch X-Case has been gasketed and sealed with 6 screws for even compression.

The unique Button design (see next story) also allows the Button assembly membrane to better assure WR around the buttons. In all other designs, the button can “squeegee” moisture into the case with each press. ACCUSPLIT Button assemblies are radially compression sealed against moisture, the strongest non-glye seal.

TWIN BUTTON

The Master Control Button specification from the AOS, allows one button to “Start, Split, Stop.” So, the traditional 2-button design which positions a button under the “trigger finger” (index finger) when properly holding a stopwatch can now have TWIN Master Control Buttons at the top of the X-case. With TWIN Buttons, you can use left or right index finger for accurate, controlled operation.

ACCUSPLIT® OPERATING SYSTEM (AOS)

The ACCUSPLIT® Operating System (AOS) evolved out of the special requirements of being able to rapidly capture and review multiple splits. Every time the SPLIT Button is pressed a new SPLIT Time is captured in the LCDisplay and the MEMORY. This Rapid-Split AOS allows the capture of race finishers as rapidly as you can press the SPLIT button.

To be sure that there is no operator confusion, the START Button becomes the SPLIT Button and the last SPLIT action becomes the STOP Time. No need to switch buttons during the timing of an event. This Professional AOS Function is still EXCLUSIVE to ACCUSPLIT Memory Stopwatches, and that button becomes the MASTER CONTROL Button.

MASTER CONTROL Button AOS then enables us to give you another Professional AOS Feature, TWIN Master Control Buttons described on page 6.

In addition, The Memory Review AOS allows dynamic review of memory splits during an event, and instant return to capturing SPLITS when the Master Control SPLIT Button is pressed.

TBX STORY

When professional stopwatch users are writing while timing, the ACCUSPLIT TBX (Timing Board for X-case design stopwatches) is the clipboard to use. The TBX has two critical design parts. The clipboard is designed to be held vertically or horizontally by drilling the ACCUSPLIT "X" Case Stopwatch Holder mounting holes in four places. Then the Stopwatch Holder can be mounted so that it is being properly held from behind as if there were no clipboard, left and right handed, horizontal or vertical format.

DUAL 5-YEAR WARRANTY

Each ACCUSPLIT Memory Stopwatch has a DUAL 5-Year Limited Warranty label on unit. Our warranty philosophy stems from Hewlett-Packard product service philosophy. Even if we "obsole" a product model, every owner is entitled to 5 years of use from the original purchase price and any late warranty service fees. Once an ACCUSPLIT Memory Stopwatch is purchased, the owner will not have to purchase another new model for 5 years.

The DUAL Warranty Label will show two wordings. The first warranty is the "pre-dated at the factory" service period. We plan on 9 months from last manufacture date to the start of a free year of service, followed by 4 years of low fee service under warranty.

The second wording is based on a traditional "Proof of Purchase Receipt" warranty. We use the warranty that gives the owner the maximum benefit.

If you happen to purchase an ACCUSPLIT Memory Stopwatch unit in the 1st month of its manufacturing cycle you will receive nearly 6 years of warranty. If you purchased a unit two years after its manufactured date, you still receive a traditional 5-year "Proof of Purchase" warranty. Please note that our warranty label includes direct contact information.

TBX ACCUSPLIT Custom Clipboard with holder

You'll Love the Large Display and Quality Workmanship!

- The ACCUSPLIT TBX is a custom clipboard set made for use with any of our exclusive "X-case" stopwatches.
- Perfect for coaches, the clipboard allows you to see and use the watch, while recording times and other information on paper.
- Your watch will fit on the board in a variety of configurations, making this system highly flexible and usable even for left-handers.
- 12.5" x 9" clipboard with pre-drilled hole patterns enables you to quickly change the position of the watch, without tools, any time you like.
- Comes with our THX Holder bracket and Hardware (no tools required) to connect to the clipboard
- Fashioned from lightweight but durable aluminum and sealed with polyurethane to help prevent scratching. (Note: stopwatches are sold separately)
- 4 stopwatch mounting positions for left/right horizontal and vertical operation
- Infinite No Proof of Purchase Limited Warranty (Include \$8.00 "Ship and Refurbish as New" fee when returning)

**Ask
Mr. Stopwatch:**

Q: Why buy this item?

A:

1. Four stopwatch mounting positions
2. See & use watch while recording on paper
3. Made from Lightweight, durable aluminum

TBX Package Includes:

- TBX Custom Clipboard
- THX Holder
- Hardware for attachment

RUBY IS 40TH ANNIVERSARY STONE

2018 is the 40th Anniversary of the invention of the Memory Stopwatch by W Ron Sutton in 1978.

To memorialize the event, ACCUSPLIT is producing translucent Ruby case Signature Models, starting with the AX725RUBY and the AX740RUBY.

All of the ACCUSPLIT innovations are included in these models. Celebrate the inventing of the Memory Stopwatch with a Signature Ruby model of ACCUSPLIT Professional Stopwatches.

MAGNUM XL DISPLAY

The Magnum XL LCDisplay of the new SURVIVORS now equals our largest standard displays. Even the smallest digit is legible without reading glasses. This large display makes the frequent use of the SURVIVOR functions easy and more comfortable.

BREAKAWAY LANYARD

For additional safety while using devices with neck lanyards all **ACCUSPLIT** Timing Devices will have a "breakaway" connection built into the lanyard. The "breakaway" pull pressure and "side position" are designed to enable a quick, safe pulling apart of the lanyard.

WATER RESISTANT SX-CASE

From the 1st SURVIVOR Stopwatch, Water Resistance (WR) has been a key design specification, hence the brand name. SURVIVOR Stopwatches are used in environmentally hostile conditions, with dust, rain, water. Even "high humidity" conditions cause system component deterioration from rust and oxidation coatings on critical surfaces. Switch/button function can easily be compromised with simple oxidation of the switch surface.

Every SURVIVOR Stopwatch SX-Case has been gasketed and sealed with 6 screws for even compression.

The unique Micro Switch design (see story) also assures WR around the switches. In most other designs, the switch can "squeegee" moisture into the case with each press.

MICRO SWITCHES

The new SX case design features precision manufactured and pre-assembled Micro Switches for reliable, long-life performance while enhancing water resistance.

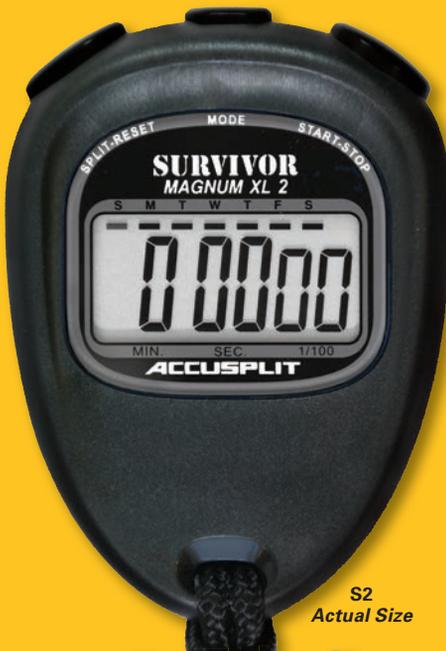

5 YEAR BATTERY

The integrated circuits are now designed to operate at 3 volts, so SURVIVOR instruments can use long-life 5-year batteries. Eliminating the hassle and expense of changing batteries frequently, has increased the value of the SURVIVOR instruments.

NEW! SURVIVOR® Series Stopwatches

Chronograph Stopwatches for Professional, Affordable Timing—Great for Physical Education!

- The New SX series stopwatches all work on the industry standard Watch Operating System (WOS).
- The New Survivor series have been redesigned in our New SX cases featuring New Micro Switches, Magnum XL Displays (S2-S3) and 5 year batteries. Each Survivor model still has economical features and functions designed to give you professional timing in an affordable manner.
- The S1-xB100 has a new Magnum display and breakaway leash. It is packaged in individual white boxes and is sold in Master Packs of 100 only.
- The S2 has a new Magnum XL display. It is easy to use, and is available in seven individual solid and translucent colors. It is also available in a Rainbow six pack (solid and translucent). It's a great low cost stopwatch for basic timing needs.
- The S3 comes with a Breakaway Safety Lanyard and features a Magnum XL display.
- All Survivor models feature Split timing, Time, Date, Day of Week and Alarm.
- The New Survivor series of stopwatches have a battery life of 5 years.
- Includes our 5 Year Dual, No Proof and Proof of Purchase Limited Warranty.

Ask Mr. Stopwatch:
Q. Why buy this series stopwatch?

- A. 1. 5-year battery life saves money and hassle
2. Magnum XL displays for easy readability without glasses
3. Extended battery life lowers the 5 year cost

FORM FACTOR

Deck The Newly Redesigned AX850 Pace Clock is the biggest value improvement in small sports timer/clocks. We enlarged the NEW Index Face by 26% (9.5 in → 12 in) while reducing the Case Size by 29% (23 in → 16.25 in) and creating an actual shipping weight design. This New Index Face and compact plastic cased clock is easy to use and has a reliable Seiko clock movement inside. Hi-tech glues, metals precision molding and assembly have combined to make an economical, reliable clock.

Stopwatch Timer/Pacer The AE625M35 is our most versatile timer. If multiple functions, especially stopwatch and timer, are needed for user applications, the AE625M35 is an economical water-resistant option.

HandHeld with Lanyard The new S3T offers the ultimate convenience of a large display timer with handheld use and breakaway lanyard security. Very simple timer in our new Survivor SX Case.

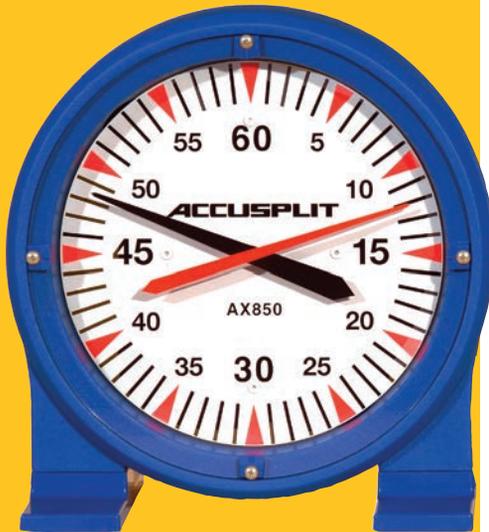

Table Top The traditional timer format has been =the reliable, big display table-top timer. We offer two choices with each being versatile in different ways. Choose the format and functions you need in your application and get a reliable, economical, long-life timer!

Tally The AL608 is the best value combination for a hand-held tally counter. It has durable parts, and is easy to use.

AX850 Large Format Lane Timer/Pace Clock

A High-Quality Timer at an Economical Price

- ACCUSPLIT's revised design is now a Larger Index Face Lane Timer in a smaller compact design.
- With a 12-inch Index Face, this clock-style timer is easier to see than our old 9.5" Index Face on our 15" dial.
- It's perfect for swim training but can also be used for any continuous/lap timing need.
- Set minute hand with simple control knob.
- Built in Concave handle on back
- Powered by 1 "AA" battery.
- Rugged ABS plastic housing in Bright Blue.
- Counts up with 1 second resolution to 60 minutes then repeats.
- Push Button Start/Stop button is relocated to the back of clock to avoid pool splash.
- Features Detachable Feet to help keep the unit upright in windy conditions, better than the previous design.
- Includes our 5-Year Proof of Purchase Limited Warranty. (See instruction sheet for warranty details).
