The FIFA Quality Programme for Footballs was introduced in 1996 to harmonise and improve the quality of footballs. Focusing on the ball, the very heart of the game, the prestigious FIFA quality labels are given to balls that have passed rigorous testing.

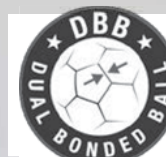

FIFA Quality Pro is reserved for only the best standard match balls available. FIFA Basic is the newest standard focusing on cost efficiency, durability and safeguarding player safety.

TBB stands for Thermo Bonded Ball. Thermal Bonding is a method that activates the glue with heat and pressure to bond the 32 panels. There are no stitches, and the TB Ball takes up less water keeping the original weight better when playing on a wet surface

Common to all our balls is that the quality is high and the durability long. An optimally round football consists of 32 panels made up of 12 pentagons and 20 hexagons. The 32 panels are hand sewn together using 630 double stitches and 60 corner stitches and are closed off - especially for Select - with a double knot. The ball lasts longer this way.

A DB ball is a construction that consists of a PU-material laminated with foam. Next, two layers of textile underlining are laminated to the foam layer to add stability. The panels are printed with 3 mm edge glue and stitched by machine. The glue is activated in the heat mold to hide the stitches and the seam sealing is done by hand. Water uptake is reduced significantly.
